Art Unit: 1761

Applicant's election without traverse of Group I, claims 1-7 in the reply filed on April 25, 2005 is acknowledged.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yee et al (US Patent No. 5750177).

Yee et al disclose a cheese containing added whey having a melting temperature of less than 200°F (see entire document, especially claims 10 and 12).

The claims differ as to the specific ratio of casein to whey.

Yee et al also teach the adjustment of the casein to whey ratio and specifically teach a ratio of at least 1:4 (whey to casein).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to adjust the whey to casein ratio as taught by Yee et al and as is claimed because the manipulation of the casein to whey ratio is well-known in the art. In the absence of a showing to the contrary Applicant is using known components to obtain no more than expected results.
